

How to clean your exodraft Chimney Fan

-**For deep cleaning**, first be sure that the fan has cooled down, then ask your local sweep/electrician to unplug the fan and take it down from the chimney.

-**Tar should** be removable using petrol(essence) or possibly petrol (paraffin) - Remember good ventilation in the work place.

-**If the tar layer is thick**, use a wooden scraper first to remove the tar.

-**Also it might be possible** to remove more dried up tar with a rotating steel brush on your drill - Remember dust mask, gloves and eye protection.
